Allergen Menu Web App

Helping guests and staff find allergy-safe dishes faster

Pilot proposal | Prepared by [Duc Ho - Steve] | [28/10]

1

Pain points

What happens today during service

Slow answers

Guests ask about allergens; staff must check with the kitchen or recipe notes.

Peak hours make this slower.

Information scattered

Ingredient and allergen details live in memory, paper, or different files.

Menu changes are easy to miss.

Risk of mistakes

Wrong or outdated allergen info can seriously harm a guest.

Staff turnover makes knowledge harder to keep.

Result: stress for staff, waiting for guests, and avoidable safety risk.

2 Solution idea

One place for dishes, ingredients and allergens

1 Store

Dishes, ingredients and allergens in one database

2 Link

Each dish is linked to its ingredients automatically

3 Filter

Pick an allergen and see which dishes to avoid or choose

4 Update

Kitchen edits an ingredient once; every dish updates

Built with Go and PostgreSQL, accessible from any phone or tablet browser.

Safety note: this is a support tool. Allergen data must be verified by the kitchen and does not replace official allergen procedures.

3 Action / Demo

What I will show live (about 3 minutes)

1 Search a dish

Open the menu and pick a dish to see its ingredients and allergens

2 Filter by allergen

Select e.g. gluten or nuts and see safe vs. unsafe dishes

3 Update an ingredient

Edit one ingredient and show all linked dishes updating

4 Add a new dish

Create a dish via the API/form and see it appear immediately

Screenshot / live demo

[Insert screenshot of the menu page here]

Current status: [e.g. database, API and basic pages working; testing with real menu data next]

4 Sponsor asking

Request: €500 to bring the pilot into real use

Item	Working Hours	Cost
Database design and migrations	[redacted]	[redacted]
Go backend API	[redacted]	[redacted]
Web interface	[redacted]	[redacted]
Testing, bug fixing, sample data	[redacted]	[redacted]
Deployment and staff guide	[redacted]	[redacted]
Development subtotal	[redacted]	[redacted]
Domain, server, database		≈ €10/month
Total request		**€500**

What you get

Working app for the restaurant

Staff guide and handover

Source code kept private

After 6 months

Running cost ≈ €10/month

Free update, maintain

Proposal: try it for one month, then decide whether to continue. Ready to start [date].
